Hi Jeff:

Colleen and I will be onsite Wednesday morning. If you need to contact us before then my cell is (b) (6).
Thanks,
Jim

Good morning. Below is a schedule update.

We are still mobilizing on Monday, July 8. However, we expect Monday to really be receiving equipment and personnel and re-confirming utility locations.

We will be using heavy equipment (arriving Monday) to clear a path to the uphill/upgradient well location (by the command post) on Tuesday morning. We have instructed the drillers to arrive around noon on Tuesday to begin drilling that well.

I welcome you to arrive whenever you like, but I'm trying to be sensitive to your schedule. I don't anticipate that we will actually turn auger until later Tuesday afternoon. After that, keeping the drillers moving will be our first priority. Thanks for helping.

Jeff

Hi Jeff:

Both Colleen and I will be on site the morning of July 8. Let us know if the schedule changes or start time is moved from 7AM that day. During drilling, Colleen will be the primary onsite representative for King County. However, she works 530 AM-2PM. I will fill in as needed but we won't have onsite presence on all the afternoons or on Saturdays. However, I can be available via cell phone during afternoons and Saturdays. That number is (b) (6). Colleen works out of our landfill nearby in Maple Valley. Her contact numbers are:
Office: 206-263-1020
Cell: (b) (6)

Thanks,
Jim

Yes, there will be geologists on site overseeing the drilling. We have budgeted for 7 x 35' wells. Our main concern is that we don't have good nearby groundwater data to guide our expectations. Also access to planned and alternate drilling locations is complicated due to surface debris, steep topography, and potentially buried material causing refusal. We anticipate some field calls are going to have to be made that may impact future groundwater sampling and evaluation made by King County and/or Ecology. I hope all this concern turns out to be a non-issue, but that's why we're glad you guys will be available to help guide the calls.

Attached is a figure showing proposed locations that James and I walked last fall.

Hi Jeffrey and Jim,
Is there a map identifying proposed locations and depths for the wells that we could take a look at?
Will there be a Hydrogeologist or Geologist overseeing the drilling?
Best regards,

Anne Holmes, PE [Supervising Engineer](#)

That's great, Jim, I'm glad to have your assistance. Our anticipated hours are Mondays through Saturdays, 0700-1730. The start date of July 8 is what we are planning for, but depending on equipment availability and time to mobilize, the hard core work may not begin on that exact Monday. I will keep you apprised as the date and commitments come in.

We don't really use a work plan. I provide a task order to the two contractors and they each submit sampling plan, safety plan, data management plan, as appropriate. All those things taken together essentially constitute a work plan but it's not a "master" work plan like you are probably familiar with. I will forward documents as they come in.

Hi Jeff,

We should be able to staff the drilling between myself and Colleen Christianson. Is there a work plan that we could review? Also as we get closer confirm if we start on the 8th and planned start time.

Thanks - Jim
